EPS Ltd. to Supply Cogeneration System for West End Community Centre in Guelph

MISSISSAUGA, Ontario, Sep 22, 2010

EPS Ltd. (www.epsenergy.ca), Canada's exclusive distributor of cogeneration systems manufactured by 2G Energietechnik (www.2-g.de) from Germany, has received an order from the City of Guelph for a 400 kW natural gas fuelled cogeneration system to be installed at the West End Community Centre in Guelph. This order represents the 3rd 2G-packaged cogeneration system destined for the Canadian market this year.

The West End Community Centre (WECC) is a modern, fully accessible, multi-purpose community centre that has a full range of facilities ranging from an aquatic facility to an NHL sized twin-pad arena to a gymnasium to community meeting rooms, café and a library complement the facility. The cogeneration system will provide power and heating to the community centre, improving the building's energy efficiency, and help reduce Ontario's greenhouse gas emissions. In the event of a power outage the CHP system will furthermore provide standby power to the community centre.

The 2G-packaged cogeneration system was selected by the City of Guelph for its outstanding quality and unique design features that include 'best in class', 2G optimized, high efficiency gas engine technology, factory designed, packaged and tested CHP module, fully integrated heat recovery system, integrated fresh and waste oil storage system, oversized, sound attenuated custom enclosure, and ease of integration with the existing building systems. Product support, service and maintenance will be provided by EPS through their dedicated and highly specialized service team located in the Guelph area.

About EPS Ltd.

EPS Ltd. (www.epsenergy.ca) is the exclusive Canadian Distributor of CHP (cogeneration) and other distributed generation systems, packaged by 2G Energietechnik from Germany. EPS Ltd. delivers an exclusive dedication to the sale, service and maintenance of best in class, advanced gas engine power generation systems and balance of plant equipment. Our business is built around an uncompromising commitment to our customer's success, while offering 'equipment only' as well as complete 'gas to grid' CHP and other distributed generation solutions. EPS Ltd. provides power generation solutions for CHP (cogeneration), biogas, landfill gas, syngas, demand response, and other gas engine applications, with sales, engineering, service, parts, and operation support provided across Canada. Our projects range in size from 35 kW to 50 MW.

About 2G Energietechnik

Building on experience with more than 1,200 CHP systems in operation around the globe, 2G Energietechnik (www.2-g.de) is a world leading manufacturer of sophisticated, advanced gas engine based CHP systems utilizing gas engine technology provided by world class manufacturers such as MAN and GE Jenbacher.
